

Radius inner curve = 25 m
Width of track = 8 m

$$1 = 2 \times \text{mean axis} = 2 \times A = 2 \times 113.57 = 227.14 \text{ m}$$

$$2 = 2 \times \text{curve} = 2 \times (B+0.5) \times (\pi) = 2 \times 25.5 \times 3.1416 = 160.22 \text{ m}$$

$$= 387.36 \text{ m}$$

NOTES:

1. This track is laid out for an Oval with radius for Mass Start of 25.0m. If the radius changes, the length of the straightaways will also change. Please contact the National Office for the exact measurements of tracks with different radii.
2. All start lines will be preceded by a pre-start line located 2m before the actual start line.
3. The fall line for the 100m and 200m races is 5m. For all other distances it is 10m.

387.36m MASS START SKATING OVAL
